

The Port of Virginia's clean engine program

Video Guidelines and Submission

The Port of Virginia Green Operator Program provides funds to replace older vehicles with ones with more emission-efficient engines and recognizes partners for achieving goals that reduce air pollution and greenhouse gases associated with the transport of cargo through The Port of Virginia.

With video capabilities on smart phones, tablets and other devices, we feel this will not place an unnecessary burden on the applicants and will further strengthen equipment verification. If this does present a challenge, please contact the program administration staff to discuss options, which may include scheduling a site visit that may add to the application processing time.

All applicants must provide a short video showing the following, all in one take (meaning it must be one continuous video).

- Truck drives forward approximately 25 feet and in reverse 25 feet
- A shot showing the inside VIN plate of the cab or the VIN in the frame
- The video must include a date/timestamp or other evidence of the date of production.

In addition, the applicant must submit the following:

- Still photo of the engine tag or imprinted engine serial number.

Please email the video and photo to emihalski@ecologixgroup.com. If you prefer to send the video or photo by text, please send the video and photo along with your name to 240-205-5368.

If you have trouble with the file size of your video you can upload it to our Vimeo site at the following address:
