

ZEV & NZEV Trucks and Charging Infrastructure

The Port of Virginia **GO-Zero Program** provides funds to purchase zero-emission (ZEV) and near zero-emission (NZEV) drayage trucks and recognizes partners for achieving goals that reduce air pollution and greenhouse gases associated with the transport of cargo through The Port of Virginia.

ZEV and NZEV vehicles, especially semi-trucks, are an emerging technology and can't be found at all sellers and dealers. Below is a list of ZEV and NZEV manufacturers and dealers to help with your search. These new types of vehicles also require different types of fueling and electric charging. Below is also a list of charging infrastructure companies.

Program partner Virginia Clean Cities is available to provide detailed fleet assistance and contacts at manufacturers and installers. Please contact aharned@vccleancities.org or call 804-482-1790 or schedule time at www.calendly.com/alleyln
